WARNING

- * Keep out of reach of children. This product is not a toy.
- * When charging, use the included cable. Do not charge with an output of 3A or higher, or with any other quick charger.
- * Ignition is not possible while charging.
- * To prevent malfunction due to heat, the power will automatically turn off after about 7 seconds if the slide button is held continuously.
- * The tip of the ignition unit gets very hot. Do not touch any part of the skin or body, or any flammable objects. There is a risk of burns from electric shock.
- * Use only for lighting candles. Do not use on people, animals, or other flammable objects.
- * Do not disassemble this product. A damaged battery can cause chemical burns if it comes into contact with human skin.
- * Do not place the product or parts near fire, or in extremely hot or cold places, humid places, or places with liquids.
- * Do not place in direct sunlight.
- * To prevent battery deterioration and damage from discharging, charge this product at least every 3 months. Storing it without charging will reduce battery capacity.
- * This product is treated the same as a lighter, so never bring it to places with strict security, such as airports or concert halls.

Product Features

Smart Ignition

The stylish design fits comfortably in your hand and makes lighting a candle an elegant gesture.

Windproof

No flame means you can light candles even in windy conditions.

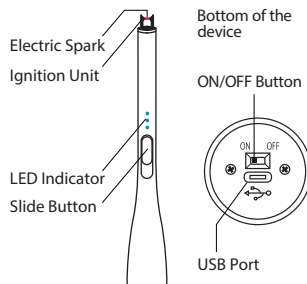

Safe Design

For safety, the power automatically turns off after about 7 seconds of continuous use.

USB Rechargeable

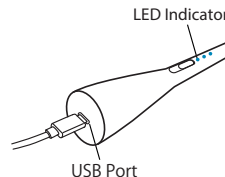

This eco-friendly and economical lighter can be recharged repeatedly with the included USB cable, eliminating the need for oil, gas, or batteries.

Components

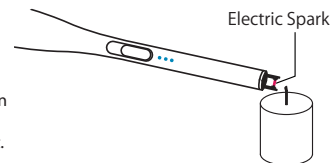

How to charge CANDLE WAND

1. When the battery level is low, the LED indicator will blink 4 times.
 2. Charge with the included USB cable (Type-C).
During charging, the LED lamps will light up in the order of 1 light → 2 lights → 3 lights.
 3. When charging is complete, all three LEDs will light up. Unplug the cable when charging is complete.
- * When the on/off button is switched from off to on, the LED indicator will light up for about 10 seconds to indicate the remaining battery level.
 - * Ignition is not possible while charging.

How to light a candle with CANDLE WAND

1. With the unit not charging, turn on the on/off button on the bottom.
2. Slide the slide button upward. At this time, the top LED indicator will light up.
3. An arc (electric spark) will appear at the tip of the ignition unit.
4. Gently touch the arc to the wick of the candle to ignite it.

An arc may not appear the first time you use it. Please try several times.

When igniting, you will hear a "buzzing" sound, but this is the normal operating sound of the electric arc lighter, so please use it with confidence.

When igniting the wick of a candle, be careful not to let the wick touch the ignition unit of the lighter as much as possible.

After use, be sure to turn off the on/off button on the bottom of the main unit. Please turn it on when using.

Melted wax, soot, and charcoal from the burnt wick attached to the tip of the ignition unit may affect the use of the lighter, so clean the tip of the lighter with a dry cloth before igniting. When cleaning the tip, be sure to turn off the on/off button on the bottom and make sure that the lighter is not operating and the LED indicator is off.

WARRANTY

Warranty Valid for ONE Year. This warranty is valid in countries outside Japan.

This warranty is on the parts on the mechanism only. There is no warranty on the surface.
